

# SAVE LIVES!

## SPREAD AWARENESS OF CORONA TREATMENTS!

The **BIG LIE** that there's no treatment has cost hundreds of thousands of lives

Here is a corona treatment protocol that works amazingly, and when started early has been keeping everyone out of the hospital BH!

Get a qualified healthcare professional to give you these treatments immediately upon experiencing Covid symptoms. **TREAT EARLY- SAVE LIVES!**

**1) Hydroxychloroquine:** First day 400 mg TWICE per day  
(2 tablets in the AM and 2 tablets at night)  
Next 4 days 200 mg TWICE per day (1 tablet in the AM and 1 at night)  
(Take **Quercetin** 500 mg twice a day as an alternative if hydroxychloroquine is not available)

**2) Ivermectin:** dose based on weight: 0.4 mg per kilo of weight (for mild disease severity) per day for 5 days at least.  
For example for approximately 185 lb person, 36 mg of ivermectin per day.  
Can be divided into 2 or 3 doses per day.

### Supplements:

Take WITH the hydroxychloroquine and ivermectin!!!

**Zinc:** About 50 mg of zinc per day.

**Vitamin D:** 50,000 IU for first 3 days

**Vitamin C:** 3 times a day at least 3,000 mg total

**NAC:** take 2 tablets of 600 2 times a day on an empty stomach

**Melatonin:** 1 at bedtime to fight against inflammation

**Aspirin:** For the first week, take regular aspirin 1x a day to prevent blood clots, and then baby aspirin 1x per day for 3 weeks.

**If Pregnant:** Take baby aspirin instead of regular aspirin, and take Ivermectin only upon doctor's recommendation—some use it after 16 weeks. Hydroxychloroquine is totally safe in pregnancy! It needs to be started right away! You may need antibiotics such as azithromycin too, or other treatments such as a Budesonide nebulizer.

Additional medications can be lifesaving if the disease has progressed, for example, steroids, fluvoxamine, fenofibrate and anti-androgen therapy. These and ivermectin have helped many people to get off the ventilator. Please see **flccc.net** for critical care information. Please also note that Remdesivir CAUSES KIDNEY FAILURE and has NOT been shown to improve patient survival at all; actually quite the opposite.

**Please speak with a qualified medical professional. There are several helpful organizations that can recommend doctors who administer these lifesaving early treatment protocols.**
